Mounting Situation

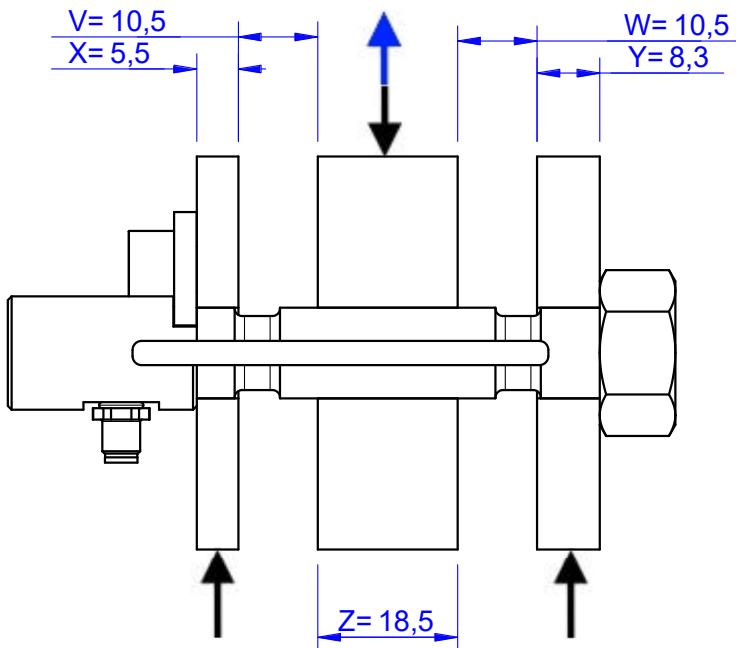

MB2070 Review: A

Bore fit of mounting situation: H7

Configuration

possible mounting situation / customer mounting could vary

(Please describe mounting situation with Vs, Ws, Xs, Ys and Zs for best possible calibration)

1. Corrosion:

Attention, the material is not stainless steel, we would like to point out that the surface of the loadpin can corrode. Corrosion protection must be provided by the customer (oil/painting).

2. Brittle fracture:

Attention danger of brittle fracture. The material is hardened steel, if the permissible breakingload on the data sheet is exceeded, sudden failure occurs. We therefore recommend not using this material if there is a risk of life, limb or property damage.

3. Final test:

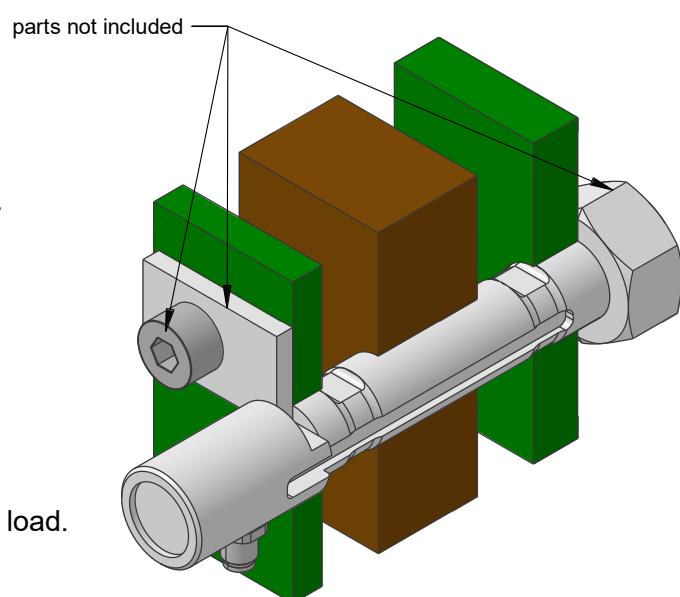

The final test of the load pin is carried out with the nominal load (F.S.).

4. Breaking load:

The specified breaking load is a calculated value. The delivered load pin was not tested for breaking load.

5. Laser Welding:

Loadpins made of this material cannot be designed with a laser-welded cover.

Output Signal & Wiring

MB2070 Review: A

Analog Output mV/V (S1)

Electrical Data			Wiringcode: WC538	Connectortype: M5 (male)			
Rated Output	mV/V@F.S.	1	2	Exitation (+)	Exitation (-)	Bridge (+)	Bridge (-)
Zero Balance	mV/V	$\pm 0,05$	3	Pin 1	Pin 2	Pin 3	Pin 4
Exitation (Maximum)	Volt	10					
Input Resistance	Ohm	450 ± 100					
Output Resistance	Ohm	352 ± 2					
Insulating Resistance	GOhm	>5					

Ordernumber Add-On:
MBxxx-x-S1-x

Attention: Nipple orientation of connector is not fixed. In case of 90° connector - it is necessary to set by customer.

*Attention: With this output configuration is no negative signal (Tension) possible. Please ask our engineering for 4..12..20mA; 1..5..9V or $\pm 10V$ versions.
